

EXOLIUM[®]

Hoofgel

Healthy claws through individual application

- ◆ Cares for the claw in case of skin irritations
- ◆ Strong adhesion to claw
- ◆ Antibiotic free
- ◆ Easy to apply after claw trimming
- ◆ Results within 5 days

Care

Exolium® Hoofcare

Exolium Hoofcare products were developed by Kanters to support your animals' claw health. Thanks to their specific composition, Exolium products are widely applicable and very suitable to care for your animals' claws. This makes them extremely suitable for both individual or herd treatment. Of course, a combination of both is also possible.

In addition to their broad applicability, all products are free of antibiotics, formalin and copper sulphate. As a result, there is no risk of antibiotic resistance and the products are safe for animals, users and the environment.

Exolium Hoofcare products meet all requirements and are therefore, among other things, extremely suitable to contribute to your business operations.

What is Exolium® Hoofgel?

For 20 years Exolium Hoofgel has been making an important contribution to Kanters' available Exolium Hoofcare solutions. Exolium Hoofgel is based on a combination of copper chelates, zinc chelates and tea tree oil and is developed for individual application after claw trimming or for care in case of direct infections. For optimal effect and protection, Exolium Hoofgel has a very strong adhesion.

Copper

- ◆ Antibacterial
- ◆ Supports claw strength

Zinc

- ◆ Antibacterial
- ◆ Promotes recovery of horn, skin and epithelium

Chelates

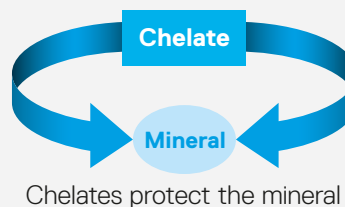

- ◆ Dirt-resistant
- ◆ Deep penetration into skin
- ◆ Working at any temperature
- ◆ No build-up of resistance

Tea tree oil

- ◆ Antibacterial
- ◆ Antifungal

What are the advantages?

- ◆ Cares for the claw in case of skin irritations
- ◆ Strong adhesion to claw
- ◆ Antibiotic free
- ◆ Easy to apply after claw trimming
- ◆ Results within 5 days

Packaging

Jar 100 ml / ± 130 gr / ± 13 claws

Jar 300 ml / ± 390 gr / ± 37 claws

Tube 300 ml / ± 390 gr / ± 37 claws

Jar 1000 ml / ± 1300 gr / ± 125 claws

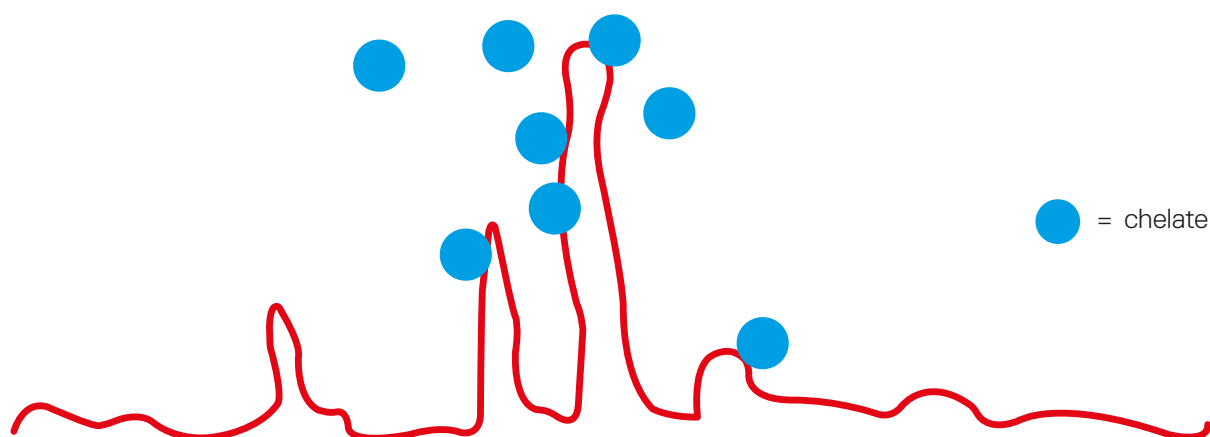

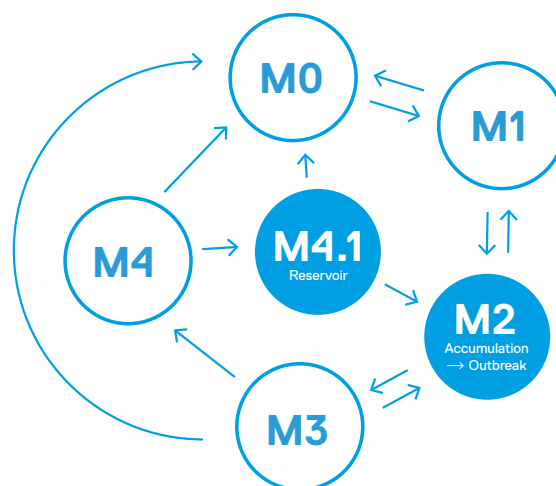

A brush for administration is supplied with the jars.

Typing Mortellaro

Mortellaro's disease is partly caused by the *Treponema* bacterium. Depending on the infection stage, Mortellaro can occur in 5 different stages:

- ◆ **M0:** There is no lesion present;
- ◆ **M1:** There is a small ulcer present (0-2 cm diameter) which is not painful when touched;
- ◆ **M2:** There is a big ulcer present (diameter > 2 cm) which is often painful when touched;
- ◆ **M3:** The ulcer is in the healing phase, often covered with a small crust;
- ◆ **M4:** The ulcer is in a chronic stage and is characterised by a hardening of the skin. The ulcer is generally not painful;
- ◆ **M4.1:** There is a chronic ulcer present, the bacteria are deeply encapsulated and still contagious.

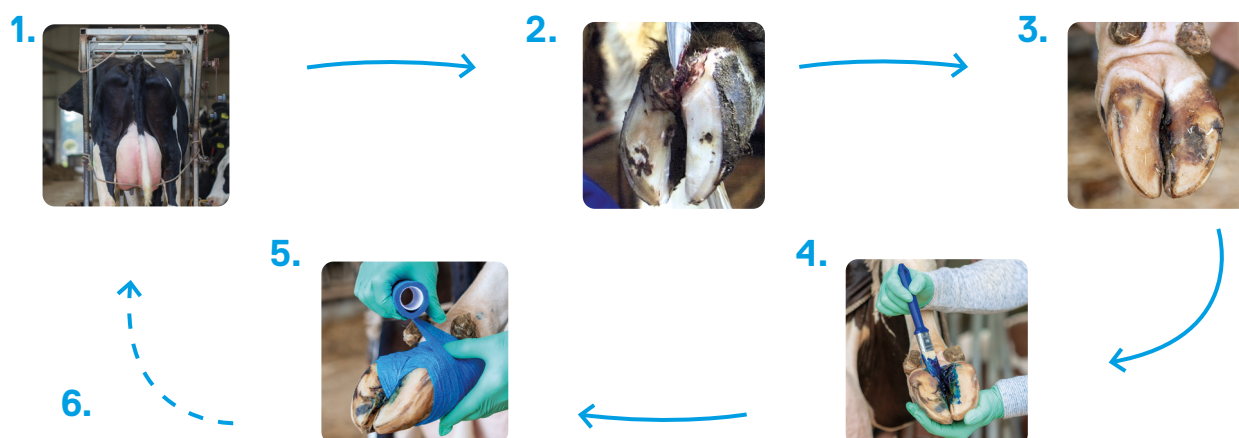

Chelated minerals are very well absorbed into the skin. As a result, in combination with copper and zinc, they have a positive effect on the skin.

Kanters
Healthy Animals, Healthy Farm

Application Exolium® Hoofgel

Step 1: Secure the animals in the hoof trimming box.

Step 2: Trim the claw and thoroughly remove all loose pieces.

Step 3: Thoroughly dry and clean the claw and interdigital space.

Step 4: Apply a well-covering layer of Exolium Hoofgel to the claw and the interdigital space. Allow a few minutes for Exolium Hoofgel to be absorbed.

Step 5: With serious wound infections tape the claw with Hooftape. Leave the tape for 2 to 5 days and then remove it.
For optimal results, reapply Exolium Hoofgel to the claw.

Step 6: Repeat steps 1 through 5 if necessary.

Kanters Health Concept

Kanters provides total solutions to the farmer. To achieve this solutions are needed that make a positive contribution to the recovery of animal health and improve results. For all kinds of situations and health issues Kanters offers an extensive range of liquid nutritional supplements applied through drinking water.

Our solutions are divided into five functional groups. Within each functional group, product choice may vary depending on the species, the type of animal, as well as farm specific situations. An optimal customized approach will be based on a specific farm analysis. You can always contact us to make arrangements for such an analysis.
